

A decorative wavy line in orange and white, running vertically along the left side of the slide.

React

Working with API

How the API works

Installing & Configuring Axios

- In terminal, type: `npm i axios`
- Create a new folder named “`services`”
- In “`services`” folder, create a new file named “`api.ts`” then type code as below:

```
const url = {  
  baseUrl: "https://restfulapi.dnd-group.net/api",  
  login: "/login",  
};  
  
const api = {  
  url  
};  
  
export default api;
```

```
import axios from "axios";
```

```
const url = {  
  baseUrl: "https://restfulapi.dnd-group.net/api",  
  login: "/login",  
};
```

```
const instance = axios.create({  
  baseUrl: url.baseUrl,  
  headers: {  
    "Content-Type": "application/json",  
    Accept: "application/json",  
  },  
});
```

```
> const api = { ...  
};
```

```
export default api;
```

```
import axios from "axios";
```

```
> const url = { ...  
  };
```

```
> const instance = axios.create({ ...  
  });
```

```
const api = {  
  url,  
  instance,  
  get: instance.get,  
  post: instance.post,  
  put: instance.put,  
  delete: instance.delete,  
  patch: instance.patch,  
};
```

```
export default api;
```

Create ResponseWrapper Type

```
1  {  
2      "errorCode": 0,  
3      "message": "",  
4      "data": {  
5          "name": "New Major",  
6          "id": 928  
7      }  
8  }
```

- In `services` folder, create a new file named `responseWrapper.ts`, then type code below

```
type ResponseWrapper<T> = {  
    errorCode: number;  
    message: string;  
    data: T;  
};  
  
export default ResponseWrapper;
```

Create userService.ts file

- In “services” folder, create a new file named “userService.ts” then type code as below:

```
import api from "../api";
import ResponseWrapper from "../responseWrapper";

type LoginInfo = {
  id: number;
  username: string;
  fullName: string;
  accessToken: string;
};

const login = (username: string, password: string) => {
  const data = { username, password };
  return api.post<ResponseWrapper<LoginInfo>>(api.url.login, data)
    .then((res) => res.data);
};

const userService = {
  login,
};

export default userService;
```

Calling Api from Login.tsx

```
import userService from "../../services/userService";
import { useNavigate } from "react-router-dom";
```

```
const Login = () => {
  const navigate = useNavigate();
```

```
  const formSubmitHandler = (e: React.FormEvent<HTMLFormElement>) => {
    e.preventDefault();
    const username = usernameRef.current?.value;
    const password = passwordRef.current?.value;
    userService.login(username, password).then((res) => {
      if (res.errorCode === 0) {
        setMessage("");
        navigate("/home");
      } else {
        setMessage(res.message);
      }
    });
  });
};
```

Modifying `api.ts`

```
import axios from "axios";

const url = {
  baseUrl: "https://restfulapi.dnd-group.net/api",
  login: "/login",
  majors: "/majors",
};

> const instance = axios.create({ ...
});

> const api = { ...
};

export default api;
```

Creating MajorService

- Create a new file named “majorService.ts” in “services” folder.

```
import api from "../api";
import ResponseWrapper from "../responseWrapper";

export interface IMajor {  id: number;  name: string; }

const list = () => api.get<ResponseWrapper<IMajor[]>>(api.url.majors)
    .then((res) => res.data);
const get = (id: number) => api.get<ResponseWrapper<IMajor>>(`${api.url.majors}/${id}`)
    .then((res) => res.data);
const add = (data: IMajor) => api.post<ResponseWrapper<IMajor>>(api.url.majors, data)
    .then((res) => res.data);
const update = (id: number, data: IMajor) =>
    api.put<ResponseWrapper<IMajor>>(`${api.url.majors}/${id}`, data)
    .then((res) => res.data);
const remove = (id: number) =>
    api.delete<ResponseWrapper<IMajor>>(`${api.url.majors}/${id}`)
    .then((res) => res.data);

const majorService = { list, get, add, update, delete: remove };
export default majorService;
```

Showing Major list

```
import React, { useEffect, useState } from "react";
import { useNavigate } from "react-router-dom";
import majorService, { IMajor } from "../services/majorService";

const Major = () => {
  const [majors, setMajors] = useState<IMajor[]>([]);
  const navigate = useNavigate();

  const loadData = () => {
    majorService.list().then((res) => setMajors(res.data));
  };

  useEffect(() => {
    loadData();
  }, []);
}
```

```
<tbody>
```

```
  {majors.map((item, index) => (
```

```
    <tr key={item.id}>
```

```
      <td>{index + 1}</td>
```

```
      <td>{item.name}</td>
```

```
      <td>
```

```
        <a href="/#">
```

```
          <i className="bi-pencil-square text-primary" />
```

```
        </a>
```

```
        <a href="/#">
```

```
          <i className="bi-trash text-danger" />
```

```
        </a>
```

```
      </td>
```

```
    </tr>
```

```
  )})
```

```
</tbody>
```

Major list

 Add

#	Major Name	
1	IT	 
2	Marketing	 
3	Network	 
4	Accounting	 

Adding a new Major

```
const MajorEdit = () => {  
  const { id } = useParams<{ id: string }>();  
  const navigate = useNavigate();  
  
  const [major, setMajor] = useState<IMajor>({ id: 0, name: "" });  
  const [message, setMessage] = useState("");  
  
>  const handleBack = () => { ...  
    };  
  
>  const handleChange = (e: React.FormEvent<HTMLInputElement>) => { ...  
    };  
  
  const handleSave = () => {  
    majorService.add(major).then((res) => {  
      if (res.errorCode === 0) navigate("/major");  
      else setMessage(res.message);  
    });  
  };  
};
```

```
<div className="card-body">
  <p className="text-center text-danger">{message}</p>
  <form>
    <Input label="Major name" id="txtMajorName" name="name"
      onChange={handleChange} defaultValue={major.name}
    />
  </form>
</div>
<div className="card-footer text-center">
  <button type="button" className="btn btn-secondary me-1"
    onClick={handleBack}>
    Back
  </button>
  <button type="button" className="btn btn-primary"
    onClick={handleSave}>
    Save
  </button>
</div>
```

Major new

Save

Showing a **Major** information

- In **Major** Component

```
<a href="/#" className="me-1"
  onClick={(e) => showEditPage(e, item.id)}>
  <i className="bi-pencil-square text-primary" />
</a>
```

- In **MajorEdit** Component

```
useEffect(() => {
  if (!/\d+/.test(id as string)) {
    navigate("/not-found");
  } else if (Number(id) > 0) {
    majorService.get(Number(id)).then(res => setMajor(res.data));
  }
}, [id, navigate]);
```

```
<Input type="text" onChange={handleChange} label="Major name"
  name="name" defaultValue={major.name} />
```

Major edit

Major name

Back

Save

Updating a Major information

```
const handleSave = () => {  
  if (Number(id) === 0) {  
    majorService.add(major).then((res) => {  
      if (res.errorCode === 0) navigate("/major");  
      else setMessage(res.message);  
    });  
  } else {  
    majorService.update(major.id, major).then((res) => {  
      if (res.errorCode === 0) navigate("/major");  
      else setMessage(res.message);  
    });  
  }  
};
```

Deleting a Major

```
> const showEditPage = (e: any, id: number) => { ...  
  };  
  
  const handleDelete = (e: React.FormEvent<HTMLAnchorElement>, id: number) => {  
    e.preventDefault();  
    majorService.delete(id).then((res) => {  
      if (res.errorCode === 0) loadData();  
    });  
  };  
  
  return (  
    |
```

```
<td>  
  <a href="/#" className="me-1" onClick={(e) => showEditPage(e, item.id)}>  
    <i className="bi-pencil-square text-primary" />  
  </a>  
  <a href="/#" onClick={(e) => handleDelete(e, item.id)}>  
    <i className="bi-trash text-danger" />  
  </a>  
</td>
```

Interceptors

Setting Up Interceptors

```
> const instance = axios.create({ ...
});
instance.interceptors.request.use((request) => request);
instance.interceptors.response.use(
  (response) => response,
  (err) => {
    if (err.code === "ERR_NETWORK") {
      window.location.href = "/network-error";
    } else {
      switch (err.response.status) {
        case 401: window.location.href = "/login"; break;
        case 403: window.location.href = "/no-permission"; break;
        default: break;
      }
    }
    return Promise.reject(err);
  }
);
```

Exercise

- Implement “Instructor” component using “/instructors” api
