

A decorative wavy line in orange and white, running vertically along the left side of the slide.

React

Bootstrap Framework & Notifying

React-Bootstrap?

- The most popular front-end framework (Bootstrap) **Rebuilt** for React.
- Website: <https://react-bootstrap.github.io/>

- <https://www.npmtrends.com/material-ui-vs-react-bootstrap-vs-reactstrap>

Integrating **react-bootstrap**

- Website:

<https://react-bootstrap.github.io/>

- Installing package

```
npm i react-bootstrap
```

- Adding stylesheet in “**src/index.tsx**” file

```
import 'bootstrap/dist/css/bootstrap.css';
```

Applying Modal in Major.tsx

```
import { Button, Modal } from "react-bootstrap";
```

```
const Major = () => {  
  const [majors, setMajors] = useState<IMajor[]>([]);  
  const [major, setMajor] = useState<IMajor>({ id: 0, name: "" });  
  const [showModal, setShowModal] = useState(false);  
  
  const handleCloseModal = () => setShowModal(false);  
  const handleShowModal = () => setShowModal(true);
```

```
  const handleChange = (e) => {  
    const newData = { ...major };  
    newData[e.target.name] = e.target.value;  
    setMajor(newData);  
  };
```

```
<Modal show={showModal} onHide={handleCloseModal}
  size="lg" backdrop="static" keyboard={false}>
  <Modal.Header closeButton>
    <Modal.Title>{major.id > 0 ? "Update" : "New"} Major</Modal.Title>
  </Modal.Header>
  <Modal.Body>
    <form>
      <div className="row">
        <Input label="Major name" type="text"
          id="txtMajor" name="name"
          onChange={handleChange} defaultValue={major.name}
        />
      </div>
    </form>
  </Modal.Body>
  <Modal.Footer>
    <Button variant="secondary" onClick={handleCloseModal}>Close</Button>
    <Button variant="primary" onClick={handleSave}>Save</Button>
  </Modal.Footer>
</Modal>
```

```
const showEditModal = (e: any, id: number) => {
  if (e) e.preventDefault();
  if (id > 0) {
    majorService.get(Number(id)).then((res) => {
      setMajor(res.data);
      handleShowModal();
    });
  } else {
    setMajor({ id: 0, name: "" });
    handleShowModal();
  }
};
```

```
<button type="button" className="btn btn-primary"
  onClick={() => showEditModal(null, 0)}>
  <i className="bi-plus-lg" /> Add
</button>
```

```
<a href="/#" className="me-1"
  onClick={(e) => showEditModal(e, item.id)}>
  <i className="bi-pencil-square text-primary" />
</a>
```

```
const handleSave = () => {  
  if (major.id === 0) {  
    majorService.add(major).then((res) => {  
      if (res.errorCode === 0) {  
        loadData();  
        handleCloseModal();  
      }  
    });  
  } else {  
    majorService.update(major.id, major).then((res) => {  
      if (res.errorCode === 0) {  
        loadData();  
        handleCloseModal();  
      }  
    });  
  }  
};
```

```
<Button variant="primary" onClick={handleSave}>  
  Save  
</Button>
```

React-Toastify?

- A library to show notifications in React App.
- Website: <https://fkhadra.github.io/react-toastify/introduction/>
- Trends: <https://www.npmtrends.com/react-toaster-vs-react-toastify-vs-react-toastr-vs-react-toasts>

Integrating **react-toastify**

- In terminal, type: `npm i react-toastify`
- In “`index.tsx`” file, import & configure “`react-toastify`”

```
import { ToastContainer } from "react-toastify";  
import "react-toastify/dist/ReactToastify.css";
```

```
<ToastContainer  
  position="top-right"  
  autoClose={5000}  
  hideProgressBar={false}  
  newestOnTop={true}  
  closeOnClick  
  rtl={false}  
  pauseOnFocusLoss  
  draggable  
  pauseOnHover  
  theme="colored"  
/>  
<App />
```

Applying **react-toastify** in **Major.tsx**

- Modify **handleDelete** function

```
import { toast } from "react-toastify";
```

```
const handleDelete = (e: React.FormEvent<HTMLAnchorElement>, id: number) => {  
  e.preventDefault();  
  majorService.delete(id).then((res) => {  
    if (res.errorCode === 0) {  
      loadData();  
      toast.warning("Delete successfully");  
    } else {  
      toast.error("Delete failed");  
    }  
  });  
};
```

- Modify `handleSave` function

```
const handleSave = () => {  
  if (major.id === 0) {  
    majorService.add(major).then((res) => {  
      if (res.errorCode === 0) {  
        loadData();  
        handleCloseModal();  
        toast.success("Add successfully");  
      } else toast.error(res.message);  
    });  
  } else {  
    majorService.update(major.id, major).then((res) => {  
      if (res.errorCode === 0) {  
        loadData();  
        handleCloseModal();  
        toast.success("Update successfully");  
      } else toast.error(res.message);  
    });  
  }  
};
```

Testing Notification

Student Management Major Student

 Delete successful ×

Major list + Add		
#	Major Name	
1	IT45678	 
2	Marketing	 
3	Networking	 
4	Business Administration	 

Exercise

- Using “react-bootstrap” and “react-toastify” to improve delete function.
 - When user clicks on “delete” icon, show a modal dialog to confirm deletion.
 - When user confirms to delete, then call web API to delete selected row.
 - Show the notification after web API returns result.

Homework

- Implement “instructor” function with Bootstrap modal
